PhD position in Immunology

A PhD position is available at the Department of Infection Biology, Universitätsklinikum Erlangen. The project is funded by the Deutsche Forschungsgemeinschaft and will focus on regulation of **B cell responses in type 2 immunity** in the context of helminth infections and allergic inflammation.

The position is funded by the Deutsche Forschungsgemeinschaft as part of a Transregional Collaborative Research Center (TRR130) where about 20 research groups study various aspects of B cell and plasma cell biology. The TRR130 has an integrated graduate school to provide a structured education program for PhD students.

We are looking for highly motivated candidates with a strong interest in cellular and molecular immunology. Experience in flow cytometry and use of in vivo models would be advantageous.

We offer a dynamic research environment with various collaboration partners. The position is available immediately. Salary will be according to the German TV-L system for up to 4-5 years.

The Universitätsklinikum Erlangen is an Equal Opportunity Employer and has an affirmative action policy for the disabled.

Please send applications with CV, copies of exams and letters of recommendation via email to:
